EDUCATION

Chulalongkorn University

B.Eng. in Computer Engineering

2018 - 2022

Chulalongkorn University

M.Eng. in Computer Engineering

2026

SKILLS

Programming Languages: Scala, Java, SQL, JavaScript, Python, C++, C, Golang, NodeJS

Backend/DevOps: API, Kafka, Docker, GitLab CI, Git, MongoDB, SQL Server, Postman

Frontend/Mobile: React, HTML, CSS, Flutter, Dart, Figma

Other: Arduino, Blockchain, Google Apps Script, JSON, Pandas

PROFESSIONAL EXPERIENCE

Backend Software Engineer - Agoda, Flight Team

July 2022 - Present

- Led supplier onboarding and API connection design for **10+ flight suppliers**, covering integration, booking flows, operational handling, and reliability improvements.
- Improved booking reliability by implementing booking class change tolerance, recovering approximately **25.3%** of affected booking-class-change cases for a major connector.
- Supported virtual credit card payment flows, generating approximately **USD 8,000** in daily profit.
- Designed the Book & Hold feature, enabling customers to hold bookings and pay later, contributing an estimated **USD 381K** in annual profit uplift.
- Contributed to the API design for Agoda's supplier onboarding platform, supporting the onboarding of **8 suppliers within 6 months**.
- Reduced deployment change failure rate by **30%** by adding production configuration validation into the CI/CD pipeline.

Backend Software Engineer - khunlook, fetal development

August 2021 - May 2022

- Developed Flutter/Dart features for a mobile health app with 100K+ downloads.
- Built a vaccination checklist and scheduling logic to calculate when children should receive each vaccine based on age and recommended timelines.
- Implemented a weight tracking feature for mothers, evaluating weight changes across pregnancy stages to help users understand whether their weight is within a healthy range.
- Developed gamification features to improve user engagement and encourage consistent health tracking.

Backend Software Engineer Intern - D+W+ / Dplus Intertrade

Jun 2021 - August 2021

- Built backend APIs and SQL database logic for the WePlus mobile app, supporting 10K+ downloads.
- Developed cart functionality for gadget merchants, including add-to-cart, cart updates, item validation, and checkout preparation.
- Implemented promotion code and coupon flows, enabling discounts to be applied to eligible products in the shopping cart.

PROJECTS

- Portfolio website:** <https://sarasix.github.io/> (for additional information and projects)
- Bcoffee Backend** : Built a coffee shop backend system supporting bill generation, stock checking, profit calculation, multi-branch management, and role-based access for admins and cashiers. (Golang, SQL, MongoDB, Docker)
- Tax Invoice** : Built an internal billing system that enables the organization to generate and manage invoices for internal use. (Java, Object Oriented Programming, PHPMyAdmin)
- Mr. Jack** : Implemented a digital version of the Mr. Jack board game using Java and object-oriented programming. Designed core game entities, turn-based player actions, character abilities, board state management, and win-condition logic to keep gameplay rules structured and maintainable. (Java OOP)

AWARD

- Computer Olympiad POSN 2 (2016): Thammasat University Center.
- RYW Programming Contest Beginner (2015): 1st place.
- ICT Challenge KMUTT (2016): 3rd place.
- Code++ Challenge ABAC (2017): Silver medal.
- Petch Yod Mongkut 19th Math (2017): qualified.
- O-NET Mathematics - Perfect Score (100/100)
